Remote Controls

SOMFY

In all of our motorized awning systems we use SOMFY motors, which are the leader in its class. With a 2 year of warranty, our motors are the most silent ones on the market. The RTS Systems, which work with radio technology, do not require a cord between motorized awning and operation source. Only with one click on the remote control you can manage your awning as you sit or have it automatically open or close with a sun and wind sensor.

In cooperation with Somfy our company has acquired "POWERED BY SOMFY". The partnership of "Powered by Somfy" approves both quality and performance and evidences the undertaking of Albayrak and Somfy regarding the quality warranty. Besides, the "Powered by Somfy" warrants that the parts of high quality have been used in the product and that the product has been developed by most advanced technology. You can be assured that by choosing an awning with the "Powered by Somfy" logo you have made the correct choice; that means, you are about to purchase an awning with the utmost motor and automatic system of high quality.
